

Thank you for purchasing the **F6 Overdrive**. Our desire is that you enjoy playing it as much as we enjoyed developing it. Please read this short manual before using the F6, as it contains important information to help you get the most out of your new F-6 Overdrive.

Using a **proper power supply** is vital. An incorrect power supply can not only cause poor performance, but can destroy the circuitry inside the pedal. Using an incorrect power supply can burn parts in the power section of the pedal, and **IS NOT** covered by warranty. **Never** use a power supply from other appliances or a multipurpose power supply. They are usually the wrong polarity, and may be AC voltage output. The proper power supply is 9V-15V DC, well regulated, with a 2.1mm female center negative jack, (Boss Style) designed for use with effects pedals. Most modern pedals use this style power supply, they are available at any good music store. The F6 draws ~12mA @9V DC

Your F-6 Overdrive comes with a 9V battery installed. You can access it by removing the four screws on the bottom plate. To ensure the battery is not being drained when not in use, either keep an external power plug inserted into the DC jack, or remove the signal IN jack.

Controls for the F6 are pretty straightforward:

**Level:** Overall output volume.

**Drive:** Sets the gain level of the circuit. Turn it down, with Level up for a clean boost. Turn it up, with Level down for more distortion.

**Treble:** Controls the amount of high frequencies.

**Bass:** Controls the amount of low frequencies.

**Mid Shape:** Sweeps the mid roll-off frequency. High settings are bright and aggressive, with emphasis on the high mid-range frequencies. At low settings, it is smoother and warm, with emphasis on the lower mid-range frequencies.

**Relay True Bypass:** On power up, the F-6 will default to the bypassed position. The LED will be off and your signal will pass through the pedal unaffected.

The F6 overdrive was handcrafted in America by BigLloydde, inc. using high quality parts. It should give long reliable service. The pedal is warrantied for 5 years from the ship date, and will be repaired or replaced at our discretion if a problem arises. Please feel free to contact us anytime with questions or comments.
